LRR	91.3%	90.7%	N/A	91.0%

* (5 returns, 2 seized/custody,)

^ (3 Dangerous Dog)

The ABCs

of Calculating the Live Release Rate

The live release rate is calculated as follows: C divided by A. Conversely, its death rate is B divided by A. The live release rate plus the death rate should always equal 100% of outcomes.

A All animals with final dispositions/outcomes, including live outcomes (adoption, transfer, reclaim) and those who died, are missing/stolen, and were killed, including "owner requested euthanasia," with only the following exception: animals brought to a shelter's medical clinic for procedures such as vaccines or sterilization where it was understood that the animal was going to be retrieved following the medical procedure.

B All deaths: animals who were killed (including "owner requested euthanasia"), animals who died in the shelter's custody or constructive custody (such as foster care), and animals who are missing and unaccounted for.

C All live outcomes: those adopted, reclaimed by their families, and transferred to No Kill rescue groups or other shelters (where they are not at risk for being killed). It does *not* include animals still in the shelter's custody or constructive custody (such as foster care).
